

## Presentation

This is the first issue of *Mathematical Methods in Economics and Finance*, a new journal published in English by the Department of Applied Mathematics of the University Ca' Foscari of Venice (Italy).

*Mathematical Methods in Economics and Finance* replaces the former *Rendiconti*, a series issued yearly from 1969 to 2005 by the Department.

After almost 40 years' experience in publishing, the development and the increasing internationalization of the Italian University has led to the decision of contributing a scientific forum at an international level.

The main features of *Mathematical Methods in Economics and Finance* are:

- publication of original papers that contribute to the theory, methodology and applications in the areas of mathematical economics, financial mathematics, mathematical finance, actuarial mathematics, management science and operational research;
- peer review process based on double-blind refereeing by at least two anonymous referees;
- inclusion in the MathSciNet list of journals;
- free internet access and free download of published papers from the website of the journal (<http://www.dma.unive.it/mmef/>).

Editor in Chief

Professor Elio Canestrelli
