A few practical points

~ Presenters are kindly asked to **upload their presentations on the laptop in the room where they are presenting**. Please do not use your own laptop for the presentation.

~ We have a **very tight schedule** thus it is crucial that sessions do not overrun. The allocated time for each paper is 30 minutes (25 minutes for the presentation and 5 minutes for questions). Please keep the assigned presentation order to allow for switching between sessions.

Keynote Lectures

Friday, November 1st, 2024 – Murat Sertel Lecture

11.30-13.00, Aula Magna G. Cazzavillan

Speaker: **Alessandro Pavan**, Northwestern University

Knowing Your Lemon Before You Dump it

Abstract: In many games of interest (e.g., trade, entry, leadership, warfare, and partnership environments), one player (the leader) covertly acquires information about the state of Nature before choosing whether to engage with another player (the follower). The friendliness of the follower's reaction depends on his beliefs about what motivated the leader's choice to engage. We provide necessary and sufficient conditions for the leader's value of acquiring more information to increase with the follower's expectations. We then derive the economic implications of this characterization, focusing on three closely related topics (expectation traps, disclosure, and cognitive styles), and drawing policy implications.

Saturday, November 2nd, 2024 – Jean-Jacque Laffont Lecture

11.30-13.00, Aula Magna G. Cazzavillan

Speaker: **Hélène Rey**, London Business School

Elephants in Equity Markets

Abstract: We introduce a novel empirical decomposition of equity price growth rates in terms of equity holdings, based on market-clearing conditions. Although our sample holdings cover only an average of 5% of market capitalization, our reconstructed equity holdings account for, on average, 89% of the time variation in over 20,000 individual stock prices and 96% of the fluctuations in 33 aggregate stock markets. Using this decomposition, we introduce new stylized facts to inform asset pricing models. We find that changes in portfolio weights explain most of the variation of individual stock prices, while aggregate wealth effects are more important for the overall stock market fluctuations. Equity markets are global and exchange rates play a key equilibrating role. They dampen local stock market volatility for all stock markets, except those associated with the three safe-haven currencies---USD, JPY, and CHF---and currencies pegged to the USD.
